

Instructions

1. Find a level surface with nothing sharp that can puncture the bag. Maybe your lawn or deck?
2. Loosen up the contents of the bag by giving it a good shake and a squeeze then stand it back on its base.
3. Unscrew the cap and add clean water as per the measurements on the back of the bag, then tightly screw the cap back on.
4. Now start mixing – turn the bag over and over, side to side squeezing and shaking to fully mix the powder and water. After a minute or so, check the window on the back of the bag to check there are no pockets of unmixed powder.
5. Cut open the bag to form a bucket. Use straight from the bag or tip onto a suitable surface and you're ready to go!

Top tip: If you find any pockets of unmixed powder just mix them in as you go. If you want a wetter mix, simply add a dash more water. It's that easy.

What you'll need:

- Measuring jug
- Scissors or knife - to open the bag

JUST ADD WATER
